LIGHTEC Carbon: A Feat of Technical Engineering

Since its inception, the Lighttec range has been synonymous with lightness and technology in the service of comfort.

In line with this approach, LIGHTEC is now launching "LIGHTEC Carbon". This new concept fitted with the screwless "alpha" spring-hinge, is made up of high-tech composite materials using carbon fiber or glass fiber. Combined with stainless steel and polyurethane rubber, the temple is flexible, solid and comfortable. By combining the assets of three different materials, Lighttec Carbon provides a product that is highly distinguished, flexible, resistant, light, comfortable and contemporary.

This masculine frame is available in 2 semi-rimless versions with a brow-bar and 2 rimless frames. Combined with the anthracite of carbon and the silver of glass fiber, the parts in polyurethane rubber are discreet in highly natural colors: grey, black and brown, as well as brighter versions in red and orange.

The "LIGHTEC Carbon" line comes with a specific "CARBON" POP kit to promote the product in sales outlets, together with dedicated packaging.
