

## FOR IMMEDIATE RELEASE:

February 26, 2010

**FLAGG:** Contrasts in material and light...

The FLAGG concept is based on simple elements: a brow-bar and cylinder... "Building blocks" that give a "very architectural" product exuding Scandinavian spirit.

The textured two-tone acetate temples play with the effects of light: the outer color reflects the (laminated) inner shade, giving an impression of relief.

With contrasts in volume, the acetate transforms into the shape of the single-piece cylindrical hinge, making the product aesthetically pleasing and reinforcing the character of the frames.

3 styles are available in this very purely lined concept (2 full rimmed -one with a double bridge and 1 semi-rimless frame) available in 4 subdued colors: black, dark blue, brown, and ruthenium.

ÖGA: products for the man of today.

For those looking for an elegant modern product, these frames stand out and assert the wearer's personality.
